Subject Pineview sampling today

Aaron,

Jim met with Gen at the site for sampling today.

She was sampling the B1 lift station which is hazardous and redundant, because it pumps up into the lift station up above.

He didn't really find anything out of the ordinary with the rest, but did get her to take a few additional samples to see if something shows that way. So, Jim said that "we are still scratching our heads over this one." Do you think we should pump the tanks or wait until the new test results come in? The sludge levels weren't at the level that we would normally require pumping, but that would have to fix the problem.

Jim and I will both update Leon today.
